Phillip Mirvis, Abraham B. (Rami) Shani, Christopher G. Worley : Building Networks for Sustainable Effectiveness: 3 (Organizing for Sustainable Effectiveness) before purchasing it in order to gage whether or not it would be worth my time, and all praised Building Networks for Sustainable Effectiveness: 3 (Organizing for Sustainable Effectiveness):

Volume 3 of the Organizing for Sustainable Effectiveness series gives readers insights into how organizations use networks, partnerships, and collaboration to achieve better and more sustainable results. Volume editors Christopher Worley and Philip Mirvis contend that globalization and its complexities have produced economic, social, and environmental challenges that cannot be addressed effectively by single organizations acting alone. Informed by individual and comparative case studies contributed by 13 authors from around the world, the volume delves into how organizations build collaborative capabilities, form cross-sector partnerships, and deliver real value for business and society by working together.

The authors of these essays present case studies in which companies partner on sustainable projects, and find that everybody wins. Projects include organizing for sustainability, using trans-organizational development and complexity theory, developing a new early childhood education network, exploring network-based capability development, transforming a seafood supply chain, creating multi-stakeholder partnerships, truly thinking about public goods, and developing public and private participation. They close with an article on lessons learned by studying partnerships for sustainability. Distributed in North America by Turpin Distribution. --Book News Inc. Portland, OR
