Reputation management aims at creating a balance between stakeholder demands, perceptions and corporate reality in order to foster behavior that helps a company achieve its business goals. It needs to be based on thorough research and

requires orchestrated execution through management processes across organizational units, communication disciplines, and countries. This calls for a management system to establish a closed cycle of strategic planning, implementation, performance measurement, and reporting. The book gives answers to the following questions: What is reputation and which conceptualizations do exist? What are the state-of-the-art methods and tools to measure corporate reputation? What are best practice examples and future trends in the field of corporate reputation management?
