Benoit Daviron, Stefano Ponte : The Coffee Paradox: Global Markets, Commodity Trade and the Elusive Promise of Development before purchasing it in order to gage whether or not it would be worth my time, and all praised The Coffee Paradox: Global Markets, Commodity Trade and the Elusive Promise of Development:

2 of 2 people found the following review helpful. Great book--a bit dry to read.By Blue Horse KonaIt's not for a casual

reading but provides thorough information about the recent specialty and commodity coffees of this planet. Doesn't take a prophetic approach or gets tangled up in romances with coffee, but a neutral, sober attitude. Describes the pitfalls and advantages of different labels like bird friendly, UTZ, USDA organic etc. It talks about the different geographic origins of coffee and the lack of (or existing) legal protections of them. 0 of 0 people found the following review helpful. Four Stars By Kevin Akoyi It was a good book and it arrived well ahead of the expected date 0 of 0 people found the following review helpful. Excellent insight and critique backed up by solid research. By Lauren Great, well researched, read for anyone trying to understand the complex supply chains that create the world's second most traded commodity.

Can developing countries trade their way out of poverty? International trade has grown dramatically in the last two decades in the global economy, and trade is an important source of revenue in developing countries. Yet, many low-income countries have been producing and exporting tropical commodities for a long time. They are still poor. This book is a major analytical contribution to understanding commodity production and trade, as well as putting forward policy-relevant suggestions for solving the commodity problem. Through the study of the global value chain for coffee, the authors recast the development problem for countries relying on commodity exports in entirely new ways. They do so by analysing the so-called coffee paradox – the coexistence of a coffee boom in consuming countries and of a coffee crisis in producing countries. New consumption patterns have emerged with the growing importance of specialty, fair trade and other sustainable coffees. In consuming countries, coffee has become a fashionable drink and coffee bar chains have expanded rapidly. At the same time, international coffee prices have fallen dramatically and producers receive the lowest prices in decades. This book shows that the coffee paradox exists because what farmers sell and what consumers buy are becoming increasingly different coffees. It is not material quality that contemporary coffee consumers pay for, but mostly symbolic quality and in-person services. As long as coffee farmers and their organizations do not control at least parts of this immaterial production, they will keep receiving low prices. The Coffee Paradox seeks ways out from this situation by addressing some key questions: What kinds of quality attributes are combined in a coffee cup or coffee package? Who is producing these attributes? How can part of these attributes be produced by developing country farmers? To what extent are specialty and sustainable coffees achieving these objectives?

'An important contribution to the literature on primary products and economic development.' Diego Pizano, National Federation of Coffee Growers of Colombia 'Daviron and Ponte have done a masterful job both of showing the limits to 'free' trade in agricultural products as well as providing some concrete proposals as to what must be done to promote greater equity. The story of the global coffee trade is an essential lesson for all those concerned about international development. This volume should be read by anyone who is interested in how international trade takes place on the ground as opposed to abstract theorizing about it.' Lawrence Busch, director of the Institute for Food and Agricultural Standards, Michigan State University 'This book uses value chain analysis to go beyond the normal hand-wringing about the coffee crisis. The authors blend theory and practice (including new data) to provide all those interested in coffee with new insights, ideas and perspective.' Peter Baker, senior coffee scientist, CABI Commodities 'Ponte and Daviron bring fresh insights to the persistent difficulties of trade as a lever of development for poor nations. Their well-crafted and historically grounded arguments precisely characterize the important intangible attributes of value and market power that are often overlooked and offer some stimulating perspectives for anyone interested in development and in coffee.' Daniele Giovannucci, consultant and author of *The State of Sustainable Coffee* 'The Coffee Paradox offers a fascinating account of how our favourite morning cup of coffee travels from poor producer regions in the Global South to relatively affluent consumer regions in the Global North. Analyzing recent transformations in coffee quality specifications and global trade networks, Daviron and Ponte illuminate the challenges and opportunities inherent in tropical export production, global trade, and shifting consumption trends. The book is theoretically sophisticated, empirically grounded, and goes the extra mile to identify promising pathways for fuelling development.' Laura T. Reynolds, co-director of the Center for Fair and Alternative Trade Studies, Colorado State University 'Aimed at academics and researchers, the Coffee Paradox raises interesting questions, using the example of coffee to explore a complex, but important subject.' *New Agriculturist* '...is an intriguing study...is likely to make an important contribution to the research, debates and initiatives addressing the relationship between commodity trade and development, as well as to the future potential of more equitable North/South relations amidst the rapid changes in production, trade and consumption in the global economy.' Douglas L. Murray, Colorado State University 'Recasts the so-called coffee paradox - the coexistence of a 'coffee boom' in consuming countries and of a 'coffee crisis' in producing countries. While coffee bar chains have expanded rapidly in consuming countries international coffee prices have fallen dramatically and producers receive the lowest prices in decades.' *Development Action*, Nov/Dec 2005 About the Author Benoit Daviron is a French agronomist and agricultural economist at CIRAD. He is currently a Visiting Scholar at the University of California, Berkeley. Stefano Ponte is Senior Researcher at the Institute for

International Studies, Copenhagen.
