**David Yurth : The H#7891; Chi Minh Guerilla Warfare Handbook: A Strategic Guide For Innovation Management** before purchasing it in order to gage whether or not it would be worth my time, and all praised The H#7891; Chi Minh Guerilla Warfare Handbook: A Strategic Guide For Innovation Management:

0 of 0 people found the following review helpful. Amazing!- most truthful account of "Free Energy" and proof of Exotic Tech you will read. Must Read!By D.P.Amazing science aside- this book should be required class for anyone getting an MBA or thinking of raising cash for a start up. David's 50 years of experience from the White House down to his basic garage-inventor start-up, really charts out how and why disruptive technology rarely makes it to market. You always imagine it's a black van with a strike team of NSA agents that keep these solutions from rolling out but he's right, 90% of the time it's the inventor and his complete lack of strategy or business know how. Been there, done

that. Every inventor should read this book before presenting their invention or idea to ANYONE...the book literally lists off everything that Nikola Tesla did wrong and could have avoided. It's a breath of fresh air to read an account so candid about about Mr. Yurth's own misadventures - it reads like a Greek tragedy. The devil is in the details and you can tell he isn't holding anything back. Yurth is a genius, this guy and his uber science team, are cracking Co2 and Methane apart and he has the paperwork to prove it. I've read it twice because the science is a bit over my education level but the comparisons to the US War in Vietnam to what it's like to try to raise money and run a start-up really hit home. Reminds me of every episode of Silicon Valley on HBO. I wish I'd read this in high school.0 of 0 people found the following review helpful. Even though the lessons learned in this book was written ...By CustomerEven though the lessons learned in this book was written in blood. The knowledge can be of value to anyone who is looking for another way of building a stronger business or stronger life0 of 0 people found the following review helpful. long winded confusion.By RobertThe title and book are intriguing. The author 's twisted linear-nonlinear reasoning guides him to a totally confused state at the end. It is all in the very last paragraph.

We already have the technologies and means for solving all of these problems:-Converting sea water to fresh water without burning fuels or creating pollution-Providing virtually infinite power without burning any fuels at all-Erasing CO2 as an exhaust gas at the source-Remediating radioactive emissions from spent nuclear fuels-Eliminating virally-caused cancers and other biocidic pathogens without surgery, radiation or pharmaceutical interventions-Growing organic, non-GMO food without the use of herbicides, pesticides or synthetic fertilizersIf we know how to solve these problems, why haven't we done it? What stands between the problem and the solution?More than 50 years ago, an aging oriental man dressed in black pajamas, leading a rag-tag army of peasants and partisans, booted the French colonial army out of his country by out-thinking and strategically exhausting them. How he managed to drive both the colonial armies of the French and the invading forces of America and its allies out of Vietnam represents a case study with far reaching strategic implications for those of us who are faced with the challenges of managing the deployment of potentially disruptive technological innovations. The right to control global social, economic and political engineering is the battlefield on which today's most important wars are being fought. In this book, David Yurth distills some of Ho Chi Minh's strategic thinking and tactical execution into a set of concepts which he believes are universally applicable to the process of technological innovation.
